The **varwidth** package (version 0.92)

Donald Arseneau[*]

September 26, 2011

1 The `varwidth` environment

The package defines a `varwidth` environment (based on `minipage`) which is an analogue of `minipage`, but whose resulting width is the natural width of its contents. A trivial example:

```
\begin{varwidth}{1in}   and   \begin{minipage}{1in}
  Trivia                        Trivia
\end{varwidth}                \end{minipage}
```

which produces

<div style="text-align:center">Trivia and Trivia</div>

(the output placed in an `\fbox` to emphasise the effect).

2 The `\narrowragged` command

The command works like `\raggedright`, but produces generally narrowe lines in paragraphs, with more text in the last line (the lines have more-equal lengths).
